

Roshan Vijay

Full Stack Developer — .NET / C# & React JS

📍 Moodabidri, India 📞 7349495469 ✉️ roshanshetty010100@gmail.com

Profile

Full Stack Developer with 4+ years of experience building and modernizing enterprise web applications using .NET Core / C#, ASP.NET MVC, React JS, and JavaScript. Proven expertise in designing secure RESTful APIs, developing responsive front-end UIs, and migrating monolithic .NET Framework systems to cloud-native microservices on Azure. Skilled with SQL Server, Azure SQL, and Cosmos DB, plus Azure DevOps CI/CD, Docker/Kubernetes, SOLID principles, and Agile delivery — driving initiatives from concept to production.

Technical Skills

.NET Core / C# / .NET 6+	ASP.NET Web API / MVC	React JS / JavaScript	jQuery	HTML5 / CSS3
RESTful APIs / GraphQL	Entity Framework Core / LINQ	SQL Server / Azure SQL / Cosmos DB		
Azure App Service / AKS	Azure Service Bus / Functions	Azure API Management (APIM)		
Azure DevOps / CI/CD Pipelines	Terraform / ARM / Bicep	Docker / Kubernetes		
Microservices Architecture	RabbitMQ / Async Messaging	OAuth2 / JWT	xUnit / NUnit / MSTest	
Git / Agile / Scrum	AI Coding Tools (Amazon Q, Cody, GitHub Copilot)			

Core Competencies

Full Stack Development	Cloud-Native .NET Development	Microservices & API Design	
Responsive UI Development	Cross-Browser Compatibility	Legacy Modernization	
Event-Driven Architecture	Database Design & Optimization	Security Best Practices	
SOLID Principles & OOP	CI/CD & DevOps Automation	Unit Testing & TDD	Code Review & Quality
AI/ML Integration			

Education

Bachelor of Engineering (B.E.) in Information Science and Engineering - 8.3 CGPA

Mangalore Institute of Technology & Engineering — Moodabidri • 2017–2021

Professional Experience

Software Engineer — Cornerstone OnDemand

Pune • Jun 2022 – Present

- Designed and developed scalable backend services, **RESTful APIs**, and **ASP.NET MVC** applications using **.NET Core**, **C#**, and **Entity Framework Core**, supporting enterprise-scale workflow management for the Performance Goals module

- Built responsive, high-performance front-end UIs with **React JS, JavaScript, jQuery, HTML5, and CSS3**, ensuring cross-browser compatibility and optimal user experience across enterprise workflows
- Led migration of the Performance Goals component from a **monolithic .NET Framework** application to a **cloud-native microservices architecture** deployed on **Azure Kubernetes Service (AKS)** using Docker containers
- Architected and led development of the **Perf-Goals-Import microservice** for high-volume bulk data ingestion, leveraging **Azure Service Bus** and **RabbitMQ** for async message processing and event-driven communication between distributed services
- Built and maintained **Azure DevOps CI/CD pipelines** for automated builds, testing, and deployments across microservices; provisioned cloud infrastructure using **Terraform** and **ARM templates** for consistent, repeatable environments
- Implemented **OAuth2 / JWT** authentication, API security controls, and input validation across all REST endpoints; proactively identified and remediated **IDOR vulnerabilities** across multiple services
- Worked extensively with **SQL Server** and **Azure SQL** for database design, stored procedures, and query optimization; used **Cosmos DB** for document storage and **Azure Blob Storage** for large file and binary data imports
- Managed and secured APIs using **Azure API Management (APIM)** for throttling, versioning, and access control across microservices, ensuring consistent API governance
- Refactored legacy **ASP.NET MVC / WebForms** modules into service-oriented microservices, decoupling dependencies and exposing standardized REST interfaces for downstream interoperability
- Wrote comprehensive unit and integration tests using **xUnit / NUnit**, maintaining high code coverage and ensuring reliability across backend services and API layers
- Led a team of developers in building an **AI-powered goal description generator** from hackathon concept to production on Azure infrastructure, improving user productivity
- Developed a localization tool that reduced manual work and saved significant developer time; currently leading development of an AI-powered comment generation tool and **MCP integration** for natural language API access
- Mentored team members on AI coding tools (**Amazon Q, Cody, GitHub Copilot**) and modern development practices, improving team efficiency and code quality
- Conducted regular **code reviews** in Agile sprints, enforcing **SOLID principles**, clean coding standards, security compliance, and best practices; actively participated in sprint planning, backlog refinement, stand-ups, and retrospectives in an **Agile / Scrum** environment

Associate Software Engineer — Allstate

Bangalore • Sep 2021 – Jun 2022

- Developed backend services and **RESTful APIs** using **C#, .NET** for the Agent Portal of Allstate Insurance Company

- Implemented business logic, data access layers, and database integrations using **SQL Server** for insurance domain workflows
- Supported end-to-end implementation of **Adobe Analytics**, transforming user interactions into actionable business insights
- Collaborated with cross-functional teams including QA, architects, and product owners in an **Agile environment** to deliver features on schedule
- Participated in code reviews and maintained high code quality standards following **SOLID principles**

Key Projects & Achievements

- **Monolith-to-Microservices Migration (.NET):** Led end-to-end migration of a monolithic .NET Framework application to cloud-native microservices on Azure AKS — decoupling dependencies, enabling API interoperability, and improving scalability and deployment independence
- **Edge Import Framework (Bulk Data Processing):** Architected a high-volume async data ingestion framework using .NET Core, Azure Service Bus, and RabbitMQ with validation, security checks, and performance optimizations — adopted across multiple teams; data persisted across Azure SQL, Cosmos DB, and Blob Storage
- **Azure DevOps CI/CD & IaC:** Built and maintained automated build, test, and release pipelines using Azure DevOps, including containerized deployments to AKS with Docker; provisioned infrastructure using Terraform and ARM templates for consistent multi-environment deployments
- **AI Integration:** Led multiple AI-powered features from concept to production, including goal description generation and comment rephrasing tools that integrate LLM APIs into production .NET Core microservices
- **Security Enhancement:** Proactively identified and fixed security vulnerabilities (IDOR, auth flaws) across microservices, creating OAuth2/JWT security guidelines and best-practices documentation for the team
